

SPECIALISED TRANSLATION

How do we support our clients in dealing with language challenges in sectors that are highly specialised?

Reego Solutions has for years supported a client keeping the text of Key Information Documents (KIDs) developed by an algorithm-based legal documentation webapp accurate and updated in multiple EU languages.

Our role as a trusted advisor in language and regulation comprised input of adequate and precise language in substitution of the English and German base in a variety of European languages. This case study illustrates how technology is also being used to support regulatory compliance and not only being subject to regulation. It also shows how language specialist partners are needed to bring innovative solutions to foreign markets. We have been responsible for:

- Managing a team of translators that update entries into the system that generates final legal documentation
- Setting up standards and agreeing on the adequate legal translation term
- Double-checking work to ensure that documentation is generated error-free
